

The Paper Ballot ~ A Passé System

After forty years many if not most systems in Sugarhill and Florida have changed to reflect advances in society with laws designed to correct voting integrity issues. These changes have ushered in requirements like secret ballot envelope and ultimately electronic voting as a consenting allowance.

82%± of sugarhill consents to vote by email, a system with 100% integrity. There are no avenues linking you to your ballot other than through you. The paper ballot on the other hand has to be opened and the link between your ballot and your name can be compromised especially with proxy voting. Our goal is to make Sugarhill elections as confidential and legally honest as possible and electronic voting meets that goal while saving the association significant money in printing and postage.

The Paper Ballot ~ A lot of Paper, Expense, and Labor

We fully understand the need for people who are uncomfortable with email and internet to be the primary users of paper voting. That is perfectly understandable. With 82%± of sugarhill voting very successfully by email it becomes very strange why any computer literate person would want to add the expense and the burden on the association Board and budget, while subjecting themselves to the significantly lower integrity security of paper ballots.
